# FLEXIBLE MOBILE WORK

TKI

NET Cloud

Mobile acquisition, processing and
Construction monitoring of FTTx networks

Mobile solution for your FTTx network data

NET Cloud supports you throughout all phases of broadband expansion. Use the mobile solution during exploration, planning, construction monitoring and network operation.

With NET Cloud you can view, create and modify routes, building points, network locations and clusters. In addition, NET Cloud provides you with the option of uploading documents and photos to your project.

Data capture → **Paths visit** → **Photos on Take on site** → **Data change** → **Monitor construction progress**

Our mobile solution NET Cloud accompanies you in the planning, construction monitoring and documentation of your FTTx infrastructures. You always have access to your network data in real time from anywhere.

The integrated user management enables flexible access and editing rights assignment. The visual user guidance makes the module intuitive to use.

Flexible working in the office & on the road

The area map gives you a mobile view of your network data in NET Cloud. In the modules Tickets and Project Management you manage tasks and processes. Photos and documents are clearly stored in a library. In the NET Cloud App, you can also conveniently take photos online and offline and save them with your location coordinates.

Live information about the network data

NET Cloud supports you flexibly as a desktop version in the office and on the road in the field with the NET Cloud App as a tool for photo documentation. You can see and edit your network data in real time, whether in the office or in the field. Changes are updated live. All data is stored in a central database. You have no further maintenance effort.

TKI

NET Cloud fits perfectly into the NET product family and supports you in all phases of broadband expansion

- Live information on network data in the office and on the move

- Collect data, qualify data, correct data

- Editing attribute and geometry data

- NET Cloud App as a tool for photo documentation on the move

- Photo documentation according to GIS ancillary regulations

- Background maps and network data can be flexibly combined

- Ticket system for centralised communication between field and office

- Intuitive operation through visual user guidance
